Claim 17 is objected to, dependency is omitted.

Claims 1-15, 17-21 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Bounce alone or taken in view of Isaksson.

Bounce fig. 1 discloses a system with ball 76, socket 44, collar 88 with arms (fins) 88, the arms being deflectable, col. 8, line 8, hence at least slightly spring like.

Reference to "adapted to be attached" does not positively require any specific feature, the claim appearing to cover the system "prior to" attachment (welding).

In addition, while not essential, Isaksson discloses welding a oploelectronic ball in socket. Obvious to apply welding to Bunce to insure stable position of ball 76.

Should the feature be at issue, also obvious to form 88 of more definite spring material, such change producing no new result over Bunce arm 88. Claims 3-5, 8, 9, 12, 13 treated as obvious variations see they do not appear basic to the invention.

Claim 16 is allowed.

PTO-1449, listed application replaced by cited Smith patent.
